LUXURY TENTS

DESERT FOX

FACT SHEET

THE
EXPLORER
RANGE
01/2024

Tentickle Stretch Tents have developed an ingenious tenting solution that is designed specifically towards the upper luxury camping market.

What sets the Explorer Range apart is the unique flexible membrane attaching the canvas cabin to the stretch tent roof, creating spectacular ceiling heights of 4 to 5 metres. Lots of open space, no roofing framework required.

The clever design exposes the Tentflex stretch tent canopy with its organic flow and luxurious look and feel – no further draping needed. Spacious interiors, large panoramic windows and the slick stretch tent ceiling offer an excellent canvas for the most sophisticated lighting and interior concepts.

For maximum performance and durability, we recommend buying your Explorer tent with its fitted engineered shade roof.

FLOORPLAN

-
- Architectural floor plan of a restaurant layout. The plan shows a large rectangular dining area with a central aisle. On the left, there are two long rectangular tables with chairs, and a curved bar area. On the right, there is a curved bar area and a long rectangular table with chairs. The plan includes various dimensions: overall width of 16320, overall height of 11000, and various internal dimensions for tables, chairs, and aisles. A red wavy line indicates a boundary or partition. A blue zigzag line is located near the bottom center. The plan is labeled with 'CD 01', 'CD 02', 'CW 01', and 'CW 02' for specific areas or equipment.

DESERT FOX

INFO

THE STRETCH TENT ROOF: 770gr Tentickle Tentflex, fire-retardant, waterproof, UV repellent, anti-microbial, highly tensile, Teflon-coated polyester stretch. The outside has a smooth, matt finish with a water-repellent lotus effect. The inside of the fabric has a natural flow and a soft, organic feel, not requiring any further draping. The fabric reflects light very effectively and offers a great canvas for spectacular lighting concepts.

THE CABIN: 500gr ripstop canvas, flame retardant, anti-fungal, combined with high tensile rubber coated mesh and optional non-milking clear PVC. Available in light grey, chino, ivory and taupe.

THE ENGINEERED SHADE ROOF: For extremely hot and sunny countries Tentickle have developed a double roofing system by adding 90% shade cloth about 50cm above the Tentflex roof. Made from high density and high tensile PE sewn with PTFE Tenara Thread, this keeps the tent cool during the day, breaks the wind and extends the lifetime of the tent. The shade cloth is re-enforced with a central panel of Tentflex fabric to ensure durability and to get that stylish stretch tent flow.
